Front Swing Arm Kits for Off-Road Bikes

Coming Soon

It is all about being in control of your bike at any given time.

Tier Motorsports is focused on providing a better riding experience. Starting with the patent pending Vertical Steering Axis which eliminates the effect of the wheel steering away from its trajectory when riding over uneven pavement. The front swing arm also offer better control during braking with its built-in anti-dive. For too long those technologies were only available to a select few but now, in an effort to bring this to the masses, front swing arm kits will be made available later this year.

The kits are expected to have an MSRP of \$2,950 and will include all necessary parts for a "plug and play" installation:

- Front swing arm
- Front wheel with tire
- In-hub Four-Bar steering mechanism, patent pending
- Swing arm frame attachment cradle
- All necessary hardware

Check out our [Engineering Blog](#) for a behind the scene look at the making of a new motorcycle suspension.
